Want to save your business money? Start with IT.

These technologies can cut business expenses for companies of any size.

Cloud Services

Cloud computing moves your hardware to software, and you eliminate the costs of maintaining your own infrastructure.

- ✓ Lower infrastructure costs
- ✓ Lower storage costs
- ✓ Eliminates compliance/legal fees
- ✓ Predictable, monthly payments
- ✓ Quick, easy scaling of users

In a survey, **94% of respondents** said the cloud would reduce setup and maintenance costs. **47%** said their IT costs would drop by 30-50%.[1]

UCaaS

Unified communications as a service eliminates the need to spend money on costly upgrades and replacements.

- ✓ Prevent downtime costs
- ✓ Better productivity = less wasted time & money
- ✓ Eliminate capital investment in hardware
- ✓ Eliminate managing multiple, global PSTN carriers
- ✓ Quick, easy scaling of users

A small business **saved 75%** by ditching an on-premise PBX.[2]

SD-WAN

Software-defined wide area networking is today's less expensive answer to multi-protocol label switching (MPLS) for networking.

- ✓ Reduce WAN costs by shifting traffic to broadband links
- ✓ Reduce networking appliances at branch locations
- ✓ Reduce admin and labor costs at branch locations
- ✓ No need to hire highly specialized engineers
- ✓ Quick, easy scaling of branch locations

In a survey, **56% of respondents consider SD-WAN** to reduce WAN costs.[3]

If you're seeking ways to cut costs in your business, these technologies are the place to start. They are just the tip of the iceberg when it comes to discovering savings through your IT department.
